

Creating a Personal Web Page

Creating FTP Space for Your Personal Web Site

FTP stands for File Transfer Protocol, and is part of the TCP/IP protocol suite. It is the protocol, or set of rules, which enables files to be transferred between computers.

Windows 95/98

From Dial-up Networking, connect to your local Internet provider.

From the *Start* menu, select **Programs, MS DOS prompt**.

OR

From the *Start* menu, select **Run**, type **command**.

A FTP DOS window appears.

From the *DOS* prompt, type **ftp members.naspa.net**

Press **Enter**.

Type **your user-id** given to you from Naspa Internet. Press **Enter**.

Type **your password** given to you from Naspa Internet. Press **Enter**.

230 User Logged In

FTP> appears.

At this point, type **quit**, press **Enter**.

Type **exit**, press **Enter** to exit and return to windows.

You have just created the space necessary to put your web files onto our servers.

You are ready to create and maintain your Web page by using your favorite Web software.

To reach your new Web page, the URL will be <http://members.naspa.net/youruserid>.

Macintosh

You will need an FTP Program, such as Fetch or Anarchie. The *FTP server* or *Host* you will connect to is **members.naspa.net**.

The *User ID* and *Password* you will use are your Naspa Internet userid and password. If asked for a *Directory* (as Fetch does), leave it blank. The first time you connect, the folder for your web page will be created. You are now ready to create and maintain your Web page by using your favorite web software.

“Naspa Internet, *We'll Get You There.*” TM
